PS C:\Users\aldoj\OneDrive\Documents\GitHub\Teste> **curl -s https://laravel.build/example-app**

cmdlet Invoke-WebRequest na posição de comando 1 do pipeline

Forneça valores para os seguintes parâmetros:

Uri: 2

curl : Não é possível localizar a unidade. Não existe uma unidade com o nome 'https'.

No linha:1 caractere:1

+ **curl -s https://laravel.build/example-app**

+ ~~~~~

+ CategoryInfo : ObjectNotFound: (https:String) [Invoke-WebRequest], DriveNotFoundException

+ FullyQualifiedErrorId : DriveNotFound,Microsoft.PowerShell.Commands.InvokeWebRequestCommand

PS C:\Users\aldoj\OneDrive\Documents\GitHub\Teste> **curl -s https://laravel.build/example-app | bash**

bash : O termo 'bash' não é reconhecido como nome de cmdlet, função, arquivo de script ou programa operável. Verifique a grafia do nome ou, se um caminho tiver sido incluído, veja se o caminho está correto e tente novamente.

No linha:1 caractere:45

+ **curl -s https://laravel.build/example-app | bash**

+ ~~~~~

+ CategoryInfo : ObjectNotFound: (bash:String) [], CommandNotFoundException

+ FullyQualifiedErrorId : CommandNotFoundException

PS C:\Users\aldoj\OneDrive\Documents\GitHub\Teste> **composer create-project laravel/laravel example-app**

Creating a "laravel/laravel" project at "./example-app"

Installing laravel/laravel (v8.6.2)

- Installing laravel/laravel (v8.6.2): Extracting archive

Created project in C:\Users\aldoj\OneDrive\Documents\GitHub\Teste\example-app

> @php -r "file_exists('.env') || copy('.env.example', '.env');"

Loading composer repositories with package information

Updating dependencies

Your requirements could not be resolved to an installable set of packages.

Problem 1

- laravel/framework[v8.54.0, ..., 8.x-dev] require league/flysystem ^1.1 -> satisfiable by league/flysystem[1.1.0, ..., 1.x-dev].
- league/flysystem[1.1.0, ..., 1.x-dev] require ext-fileinfo * -> it is missing from your system. Install or enable PHP's fileinfo extension.
- Root composer.json requires laravel/framework ^8.54 -> satisfiable by laravel/framework[v8.54.0, ..., 8.x-dev].

To enable extensions, verify that they are enabled in your .ini files:

- C:\PHP 8.0 (8.0.6)\php.ini

You can also run `php --ini` inside terminal to see which files are used by PHP in CLI mode.

```
